The Essential Role of Data in Addiction Treatment:
Findings from the NAATP Foundation for
Recovery Science and Education (FoRSE)

Dr. Annie Peters

Director of Research & Education
NAATP & FoRSE

The Addiction Crisis

Substance Use Disorder (SUD)

48.7 million (17.3%)

More than 1 in 6

(17.3%) people aged 12 or older
had a substance use disorder
(SUD) in the past year.

SAMHSA, 2023a

NAATP
NATIONAL 2024

The Addiction Crisis

More than **1 in 6** Americans had a substance use disorder in the past year.

Over **54 million** people need addiction treatment.

85% do not receive the care they need.

380 people die every day due to alcohol.

A drug overdose death occurs every **5 minutes**.

NATIONAL ASSOCIATION[®]
OF
ADDICTION TREATMENT PROVIDERS

Why Don't People Get Treatment?

Self-Reported Reasons

- Thinking they should have been able to handle their alcohol or drug use on their own (78%)
- Not knowing how or where to get treatment (52%)
- Thinking that treatment would cost too much (48%)
- Not having health insurance coverage for alcohol or drug use treatment (42%)

SAMHSA, 2023b

Systemic Reasons

- Stigma
- Lack of parity / can't afford it
- Racial inequity
- Lack of research

Fundamental Issue:

Addiction health care has historically been treated differently than physical health care

“The creation of FoRSE is undoubtedly the keystone to our future. Our future ability to advocate for our programs will be grounded entirely in data.”

Dr. Nick Hayes
Chief Science Officer
Cumberland Heights

Accepted Data Points & Outcome Surveys

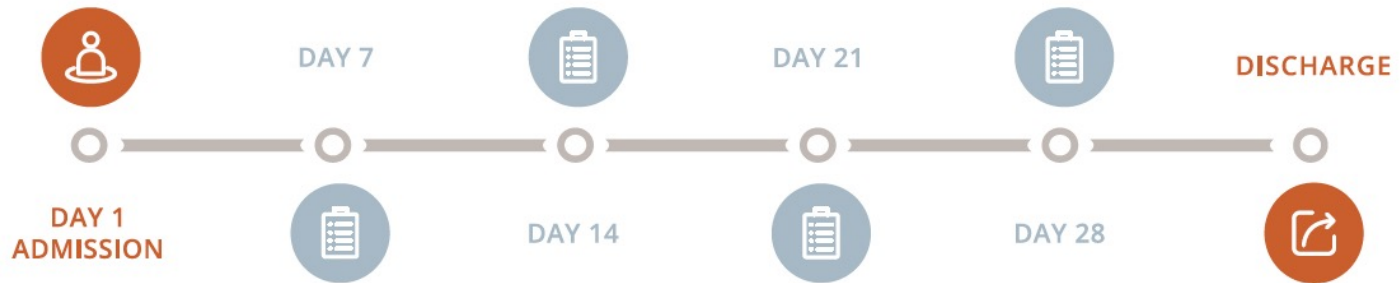

Accepted Measures

- ✓ Brief Addiction Monitor (BAM, BAM-R)
- ✓ Brief Assessment of Recovery Capital (BARC-10)
- ✓ FoRSE Outcomes Survey
- ✓ FoRSE Progress Monitoring Survey
- ✓ Generalized Anxiety Disorder screen (GAD-7)
- ✓ Patient Health Questionnaire (PHQ-9)
- ✓ Treatment Effectiveness Assessment (TEA)
- ✓ World Health Organization Quality of Life (WHOQOL-BREF)

Recommended Measurement Schedules

Progress Monitoring: Every 7 Days (for Residential programs)

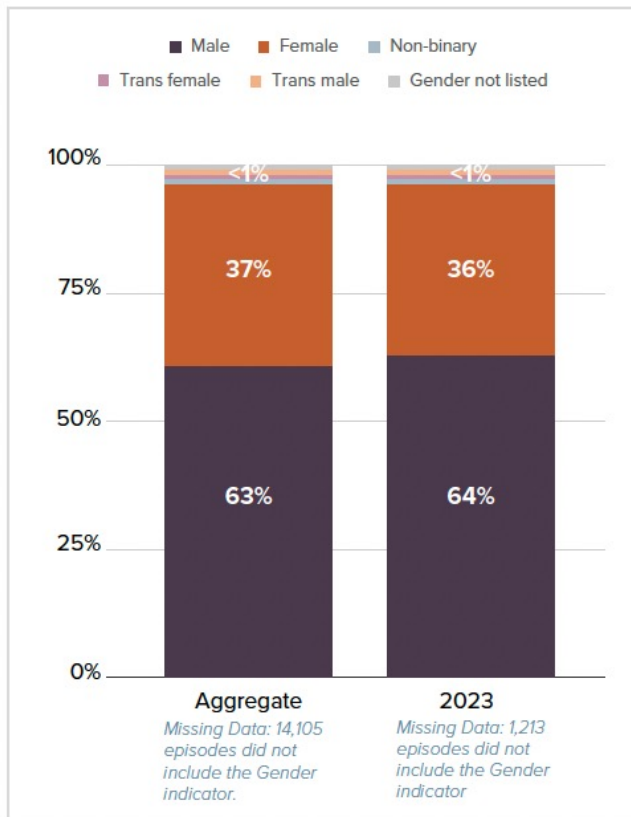

Post-Discharge Monitoring: 1, 2, 3, 6, 9, and 12 months post-discharge (annually thereafter)

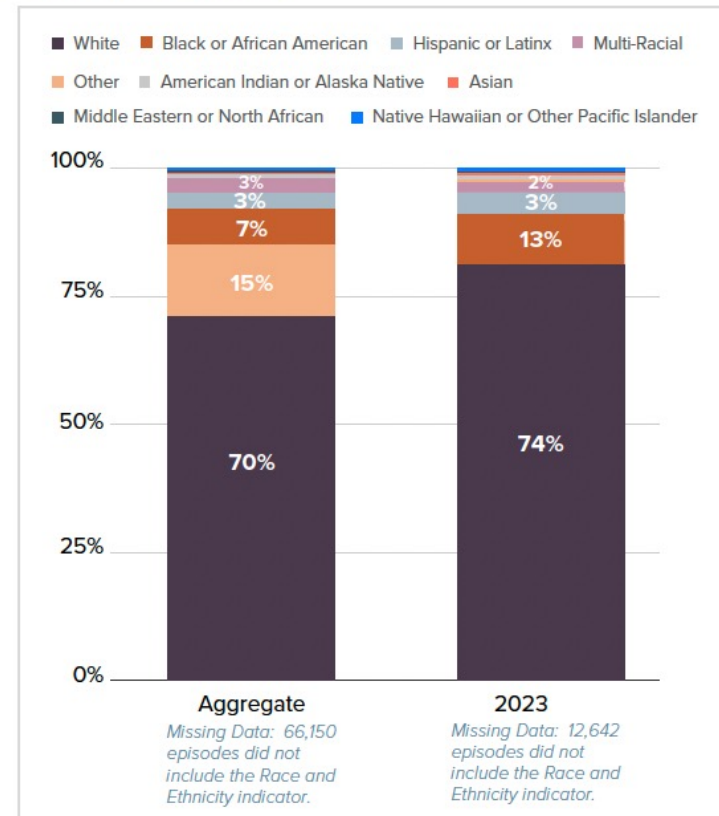

Demographics

Gender

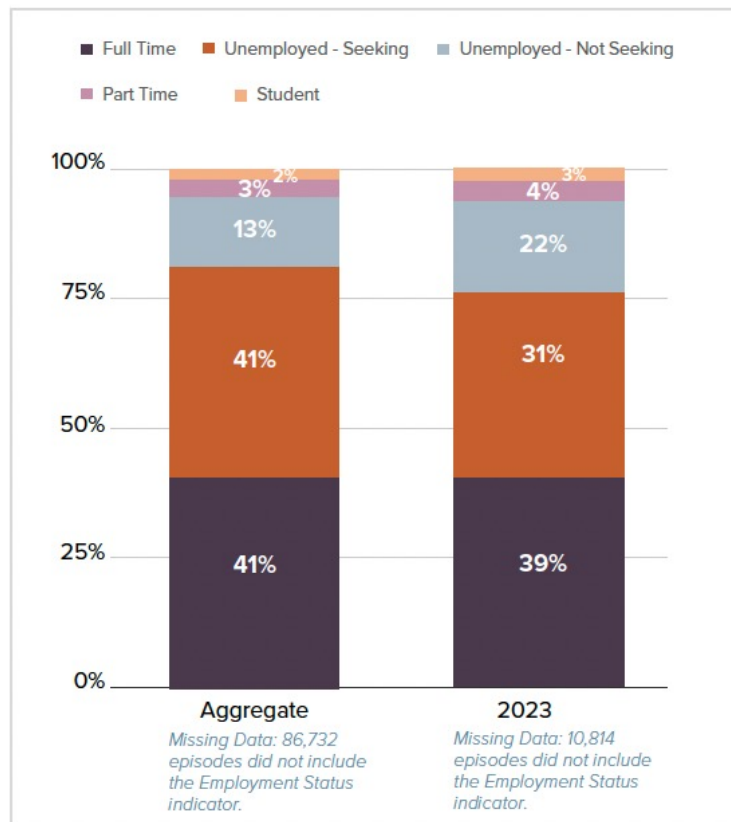

Race and Ethnicity

Social Determinants of Health

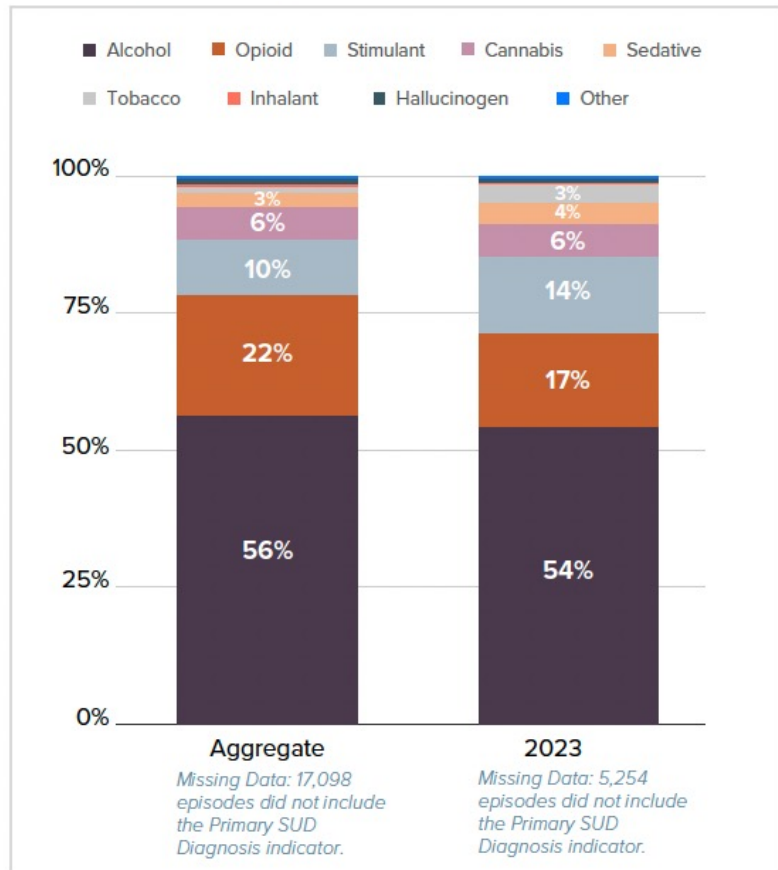

Employment Status

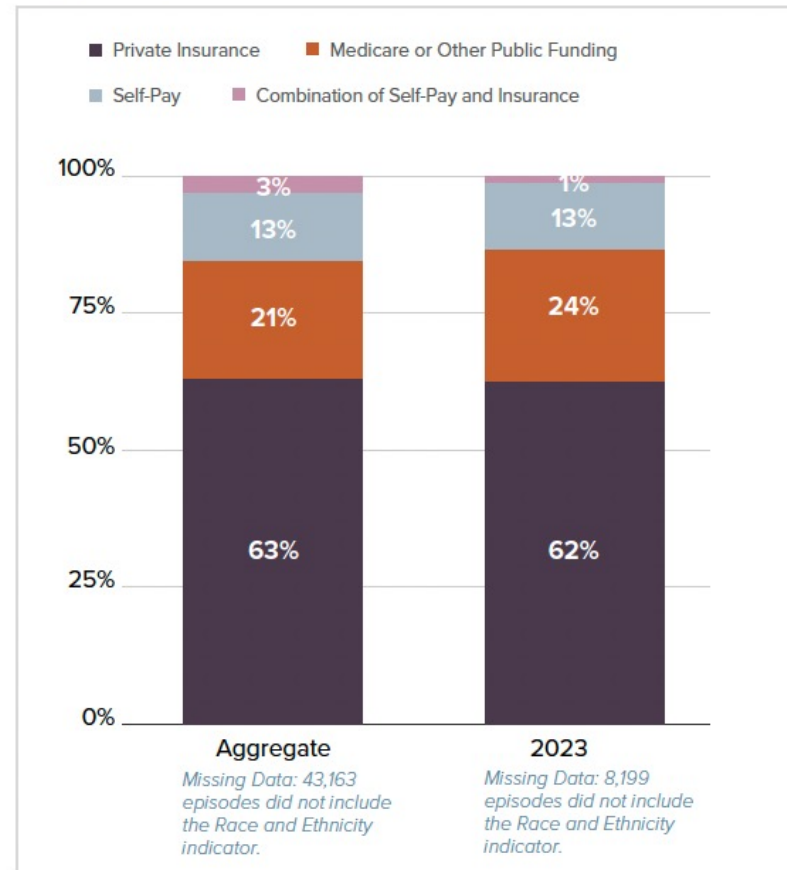

Housing Status

Primary SUD Diagnosis

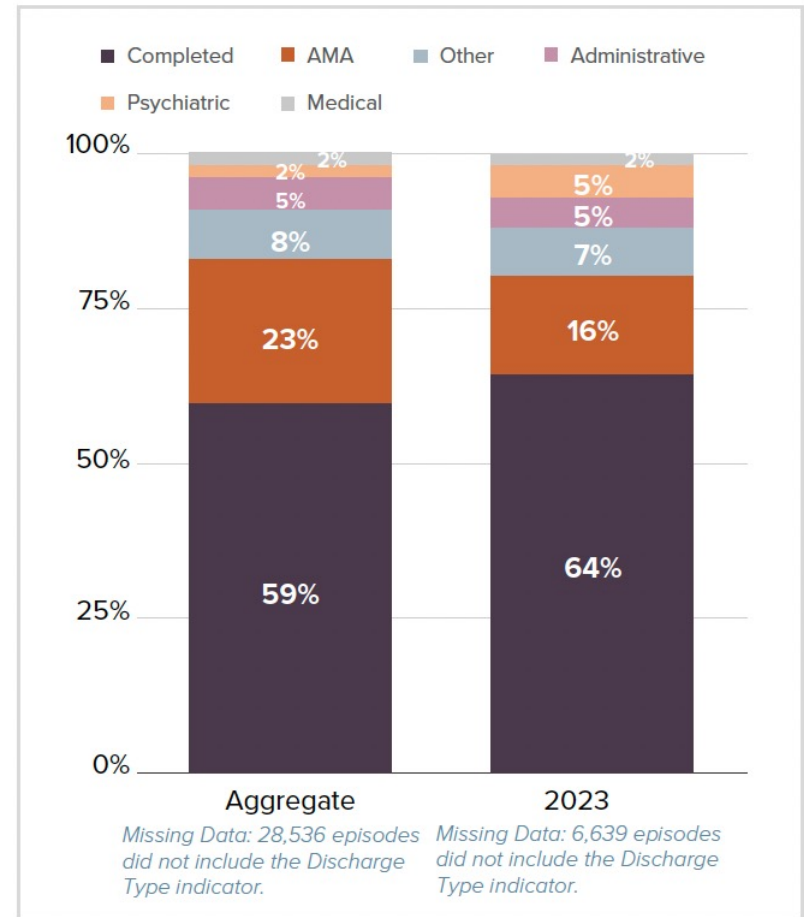

Payor Type

Medication Assisted Treatment (MAT) Reported at Discharge

Discharge Type

Length of Stay by Level of Care (Calendar Days) (2018-2022)

Observed Patient Change

Progress Monitoring

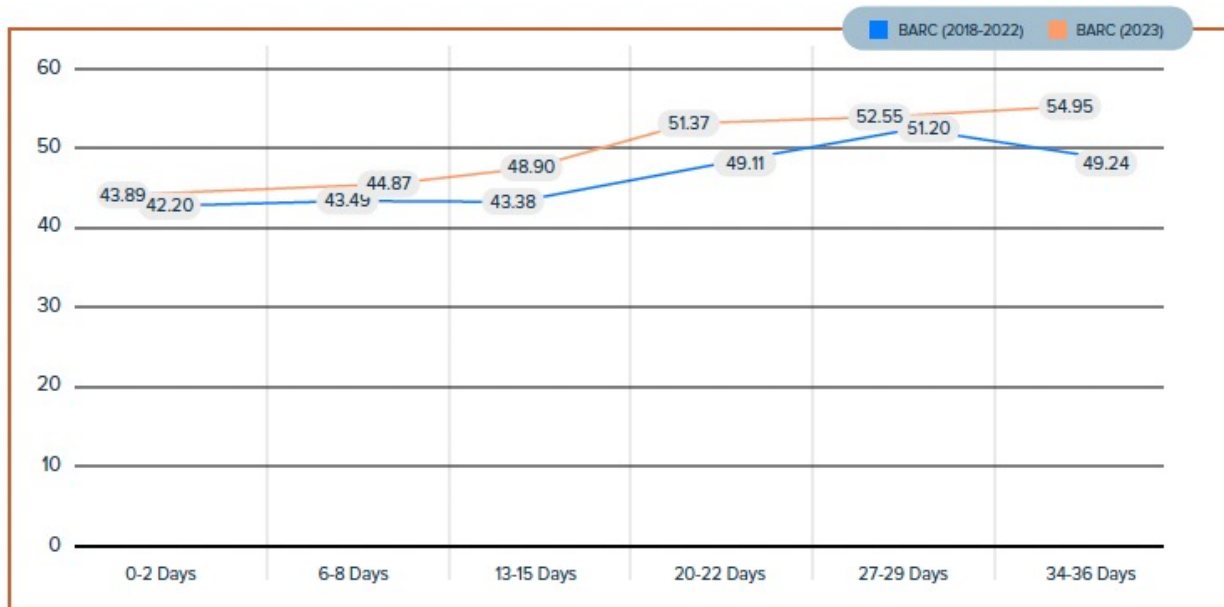

Surveys completed at 0 to 36 days from admission (or longer for BAM), within +/- one day of recommended measurement time points

Post-Discharge Observations

Surveys completed at 0 to 366 days from discharge, within +/- one day of recommended measurement time points

Progress Monitoring: BARC-10

Preliminary
Data

	0-2 Days	6-8 Days	13-15 Days	20-22 Days	27-29 Days	34-36 Days
BARC (2018-2022)	42.20 (9.11) (n = 626)	43.49 (10.43) (n = 63)	43.38 (10.04) (n = 21)	49.11 (7.35) (n = 19)	51.20 (7.42) (n = 41)	49.24 (12.38) (n = 33)
BARC (2023)	43.89 (9.17) (n = 786)	44.87 (9.02) (n = 77)	48.90 (9.01) (n = 30)	51.37 (10.12) (n = 19)	52.55 (8.51) (n = 113)	54.95 (6.48) (n = 57)

Preliminary
Data

Progress Monitoring: Brief Addiction Monitor (BAM)

(2018-2022)	0-2 Days (n = 1,042)	29-31 Days (n = 1,010)	59-61 Days (n = 334)	89-91 Days (n = 298)
Use	4.05 (3.48)	1.42 (1.97)	0.44 (1.29)	0.23 (1.07)
Risk	10.50 (5.77)	6.08 (4.14)	5.63 (4.10)	5.33 (3.89)
Protective	14.50 (4.34)	15.37 (4.02)	16.60 (4.34)	17.26 (4.01)

Preliminary
Data

Post-Discharge: FoRSE Outcomes Survey

Q7: What is your current employment status? (2019-2023)

Q8: Have you experienced a relapse since discharging from treatment? (2019-2023)

	29-31 Days	59-61 Days	89-91 Days	179-181 Days	269-271 Days	364-366 Days
Q8 (2019-2023)	<ul style="list-style-type: none"> No - 92% Yes - 8% 	<ul style="list-style-type: none"> No - 90% Yes - 10% 	<ul style="list-style-type: none"> No - 88% Yes - 12% 	<ul style="list-style-type: none"> No - 81% Yes - 19% 	<ul style="list-style-type: none"> No - 80% Yes - 20% 	<ul style="list-style-type: none"> No - 79% Yes - 21%

PHQ-9

Preliminary
Data

Completed (2019-2023): (n = 75,453) across 49 distinct organizations.

	Treatment		Post Discharge					
	Admission	Discharge	29-31 Days	59-61 Days	89-91 Days	179-181 Days	269-271 Days	364-366 Days
PHQ (2019-2023)	12.61 (7.13) (n = 10,801)	7.35 (6.65) (n = 12,046)	4.24 (5.31) (n = 1,290)	3.56 (4.54) (n = 928)	3.23 (4.31) (n = 736)	3.20 (4.35) (n = 543)	3.32 (5.06) (n = 471)	3.62 (5.64) (n = 66)

GAD-7

Preliminary Data

Completed (2019-2023): (n = 74,047) across 46 distinct organizations.

	Treatment		Post Discharge					
	Admission	Discharge	29-31 Days	59-61 Days	89-91 Days	179-181 Days	269-271 Days	364-366 Days
GAD (2019-2023)	11.18 (6.14) (n = 11,244)	6.86 (5.99) (n = 10,410)	4.25 (5.02) (n = 1,267)	3.44 (4.29) (n = 913)	3.06 (4.12) (n = 720)	3.03 (3.98) (n = 536)	3.17 (4.72) (n = 454)	3.16 (4.59) (n = 63)

Preliminary Findings

- Individuals who participated in more than 30 days of treatment were 65% less likely to relapse, compared to those with less than 30 days of treatment.
- Individuals who were observed to have high psychiatric acuity at admission were 60% more likely to relapse and discharge prematurely from treatment, compared to those with low admitting acuity.
- On average, individuals experienced a 42% decrease in symptoms of depression, a 39% decrease in symptoms of anxiety, and a 51% decrease in symptoms of SUD observed during the course of treatment.

“We have an opportunity to change the landscape of treatment evidence. Researchers often have to rely on Medicaid data alone when looking for large scale studies of treatment. We know that is an important subset, but its often all we have. We have this new opportunity because of FoRSE.”

Dr. Corrie Vilsaint
Instructor, Harvard Medical School
Research Scientist, Recovery Research
Center for Addiction Medicine and Massachusetts General Hospital

Why Become Data-Informed?

- **Defined:** “... a health system in which internal data and experience are systematically integrated with external evidence, and that knowledge is put into practice”.¹
- **Importance:** Enhances patient care, operational efficiency, and strategic planning.
- **Goal:** Equip your organization to make better decisions using data-driven insights.

What has Cumberland Heights Learned?

What was the yield?

Business Intelligence: Increased our visibility across our health system (i.e., patient, treatment, and outcomes).

Internal Process Investigations: Equipped our team with the tools needed to create data informed changes (e.g., AMA, SI/Trauma, and Scholarship).

Valid Outcomes: Empowered our organization with the valid output needed to better advocate for our services (e.g., SUD Outcomes, FoRSE, and Payers).

(Hayes, 2021)

Example (Admissions)

1. Race & Ethnicity

- 70% to 0% Missing (Implementation of Gardening Protocol)

Example (Clinical)

2. Suicide Risk

- 20% to 0% Missing (Implementation of Gardening Protocol)

Example (Payers)

3. Readmission

- Data Informed Discovery

Readmission Status by [REDACTED] Policy Type			
	90 Days	6 Months	1 Year
[REDACTED] (n = 164)	10%	13%	16%
[REDACTED] (n = 124)	19%	25%	28%

Note: These data represent only those patients served in 2023 who had [REDACTED] insurance.

Readmission Status by Length of Stay			
	90 Days	6 Months	1 Year
LOS < 30 (n = 91)	13%	20%	25%
LOS > 30 (n = 72)	3%	3%	3%

Note: These data represent only those patients served in 2023 who had [REDACTED] insurance. Additionally, only those who successfully completed treatment were included.

Core Components

1. Data Collection

- Comprehensive and accurate data gathering.

2. Data Analysis

- Employing advanced analytics to uncover insights.

3. Data Integration

- Combining data from various sources for a holistic view.

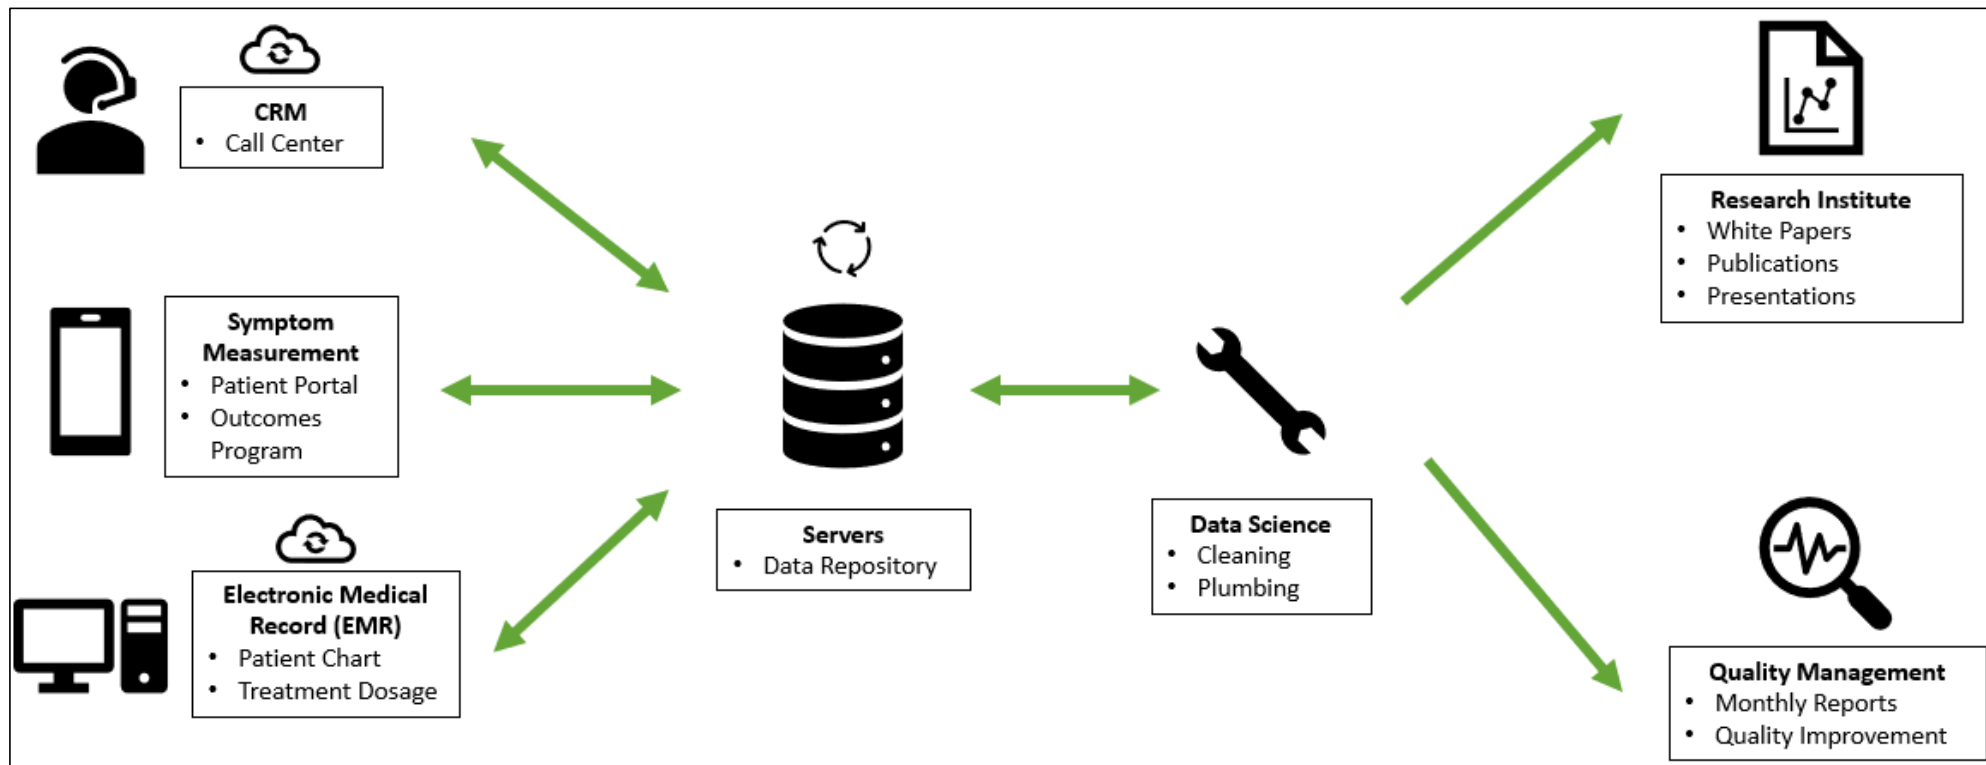

4. Data Governance

- Ensuring data quality, privacy, and compliance.

5. Data Culture

- Fostering a culture that values data-driven decision making.

Data Stack Example

Effective Data Collection (Best Practice)

- 1. Standardized Methods:** Consistent data entry and reporting procedures.
- 2. Patient Engagement:** Create processes and incentives that support valid data collection.
- 3. Technology Utilization:** Use EMR systems, mobile apps, and wearables.
- 4. Continuous Monitoring:** Regularly update and verify data accuracy.

Data Analysis Techniques

- **Descriptive Analytics:** Understanding historical data trends.
- **Predictive Analytics:** Forecasting future outcomes and risks.
- **Prescriptive Analytics:** Recommending actions based on data.
- **Visual Analytics:** Using dashboards and visual tools for better comprehension.

Visual Analytics Example

The screenshot shows a web dashboard for Cumberland Heights. At the top left is the logo "cumberland heights" with a house icon. At the top right, it displays "88° 54 Hello, Nick!". Below the logo is a navigation menu with icons and labels: MENU, APPS, HR, DIRECTORY, **REPORTS** (highlighted in green), KPIS, SURVEYS, POLICIES, and LEARNING. Below the menu is a text block: "Easily access our new reporting features anywhere with our **BI Reports**. Here you can view up-to-the-minute detailed reports on business critical functions within our organization." Below this text are six report categories, each with an icon and a title: **CENSUS** (people icon), **RESIDENTIAL CLINICAL** (bed icon), **OPERATIONS** (gears icon), **MASTER CLINICAL** (list icon), **OUTPATIENT CLINICAL** (clipboard with plus icon), and **FINANCE** (dollar sign icon). A description for the CENSUS report reads: "Average daily census and total days for residential, ARCH, IOP, and Stillwaters programs."

Data Governance and Compliance

- **Data Quality:** Regular audits and validation.
- **Privacy:** Adherence to HIPAA and other regulations.
- **Security:** Robust cybersecurity measures.
- **Policies:** Clear guidelines and protocols for data use.

Fostering a Data-Driven Culture

- **Leadership Commitment:** Top-down support for data initiatives.
- **Training and Development:** Continuous learning opportunities for staff.
- **Collaborative Environment:** Encourage cross-departmental data sharing.
- **Incentivize Data Use:** Reward data-driven decision-making.

Celebration of Knowledge

Problems to Avoid

Time/Expectations: Do not rush the process. Expect delays and stick to your simple goals.

API Commitments: Ensure the database platform, access, and documentation are all congruent with your goals.

Staff Shortcuts: There is rarely a rationalization to value engineering your technical staff. You get what you pay for.

(Wickham & Grolemund, 2019)

Building Your Team

Becoming a Data-Informed Organization

Strategic Questions

- Who is your organizational champion?
- What are your operationalized goals?
- (Hardware) Cloud vs. On-Premise? [Server **Est. Cost \$125,000**]
- (Software) SQL? [Est. Cost **\$75,000**]
- Technical Staff? [**Network Administrator \$125,000, Senior Developer \$130,000, and Data Scientist \$115,000**]

Implementation Road Map

1. **Assess Current State:** Evaluate existing data capabilities.
2. **Develop a Strategy:** Align data goals with org. goals.
3. **Invest in Technology:** Acquire necessary tools and systems.
4. **Train Staff:** Build data literacy across the organization.
5. **Monitor Progress:** Regularly review and adjust the strategy.

Conclusions and Q&A

- The future practice of addiction treatment will be ***prescriptive and tailormade***.
- The use of measurement markers will allow professionals to monitor for treatment completion ***based on valid tools—not opinion***.
- These processes will support our ability to (1) **increase access to recovery**, (2) **improve our programs**, and (3) **communicate with external stakeholders**.
- Very simply, ***the future of addiction treatment lies within our data***.
- **Next Steps:** Start small, prioritize key areas, and scale up.
